## SECTION 7: Handling and storage

### 7.1 Precautions for safe handling

Information about fire - and explosion protection:

During the processing of the product, avoid inhalation of fumes or powders, by providing good ventilation of the workroom and, if necessary, by a suitable exhaust system.

Comply with personal hygiene measures and use the personal protective equipment (see chapter 8). Do not smoke, eat or drink in the workplace. Re-seal opened containers.

Use gloves and safety glasses. Avoid contact with sources of ignition. Elevated processing temperatures may result in some degree of thermal degradation: as a guideline 250°C is the maximum allowed temperature for very short time.

The product is a poor conductor and it is likely to accumulate electrostatic charges. Precautions normally used for non conductive materials and against the accumulation of electrostatic charges should be used during processes which employ powdered materials or produce dust (e.g.: reduce speed to the minimum, install earthing systems, the absolute prohibition to smoke and use free flames, use inert gases in mills and in the closed systems).

### 7.2 Conditions for safe storage, including any incompatibilities

Storage:

Requirements to be met by storerooms and receptacles:

Store in a cool, dry, ventilated area.

Earth storage silos as precautionary measure against the static electricity build-up.

Store the product in a covered place in its sealed packaging, away from direct sunlight and heat sources.

Ensure the proper ventilation in all storage areas.

Information about storage in one common storage facility:

Further information about storage conditions:

#### 7.3 Specific end use(s)

Not required.

In storage do not exceed 35°C.

No further relevant information available.

### 8.2 Exposure controls

General protective and hygienic measures:

Traces of monomers and other volatile substances may be given off during processing, particularly at unusually high processing temperatures.

Work rooms must be provided with adequate ventilation and exhaust equipment to collect dust and gas/vapours that may be evolved during the conversion.

Ensure good ventilation / exhaustion at the workplace.

The personal protective equipment will vary according to the possible exposure and danger of working conditions.

In normal conditions masks with antidust filters should be available for use when requested.
